EDUCATION

Indiana University, Bloomington

Bachelor of Science: Computer Science, Specialization in AI

Bloomington, IN

Aug. 2023 – May 2027

Course Work: Software Systems in Java(OOP Principles), Data Structures & Algorithms, Discrete Math, System Programming with C & Unix, SQL Programming, Data Analysis & Mining, Introduction to AI

EXPERIENCE

Aurus.ai

Software Engineer

Sept 2025 – Nov 2025

Sacramento, CA

- Reduced end-to-end processing latency by 85% (3–5 days → 2–4 hours) by designing cloud-native Python and FastAPI AI pipelines using LangChain and Azure OCR, enabling high-throughput document extraction, automated validation, and reliable production-scale processing across 100+ weekly inputs
- Improved processing accuracy by 90% while scaling throughput 10× through multi-agent AI orchestration with Redis/Celery queues, PostgreSQL-backed state, and JWT-secured APIs supporting concurrent document workflows

Stanford Accelerator for Learning

Software Engineer Intern

May 2025 – Sept 2025

Palo Alto, CA

- Built and shipped core features for KAI, an LLM-powered reading comprehension platform deployed across 10+ Bay Area school districts and international schools (1,200+ students, 50+ teachers), collaborating cross-functionally with educators, PMs, AI engineers, and special-needs experts to deliver classroom-ready, research-aligned releases
- Designed the teacher dashboard from the ground up, owning frontend architecture and state management for real-time insights; reduced load times from 15–30s to 2–4s and boosted core feature success rates to 95%

SpedTree

Software Engineer Intern

May 2025 – July 2025

Remote

- Reduced worksheet prep time by 90% (1 hr → 5 mins) across 3 pilot schools by deploying secure DALL·E 3 APIs with GPT-4o-mini pipelines, ensuring consistent formatting and accessibility in special-education use cases
- Boosted educator adoption by 35% by engineering MongoDB-backed APIs with rate limiting and validation logic, supporting personalized LLM-powered classroom data access and reliable microservice workflows

PROJECTS

Auto Slate | *FastAPI, OPENAI GPT-3.5-turbo, OpenAI Whisper API, Twilio, PostgreSQL, Railway, Docker*

- Developed an AI-powered voice agent platform using Python, FastAPI, Twilio Voice API, and PostgreSQL, automating reservation booking, menu inquiries, and business-hour support across active restaurant deployments
- Built and deployed scalable backend services with FastAPI, PostgreSQL, and Docker, implementing persistent state management and asynchronous workflows on Railway that accelerated release cycles by 80%

DocuSynth(Nvidia AI Agent Hackathon) | *Next.js, FastAPI, NemoTron 49B, Nvidia Brev*

- Accelerated documentation generation by 50% while reducing memory usage by 75% by deploying NVIDIA Nemotron 49B with 8-bit quantization and GPU acceleration on NVIDIA Brev for high-performance inference
- Built a full-stack AI documentation system using Next.js and FastAPI, coordinating model inference, API orchestration, and real-time outputs optimized for scalable GPU-backed workloads

DataForge | *FastAPI, PostgreSQL, Apache Kafka, Redis, LangChain, Streamlit, Scikit-learn, Pandas & NumPy*

- Delivered 40–85% query performance improvements by building an AI-powered SQL optimizer with GPT-4 + LangChain, automated schema migration, and Redis caching layered over PostgreSQL and Kafka streaming.
- Increased system reliability to 99.95% uptime by deploying Dockerized microservices with CI/CD pipelines (GitHub Actions), role-based access control (RBAC), and enterprise-grade monitoring via Prometheus, Grafana, and Sentry.

TECHNICAL SKILLS

Languages:Java, Python, JavaScript, C, Node.js, SQL

Frameworks:Spring Boot, Flask, Next.js, Express.js, React, FastAPI, Langchain, Sckit-learn

Libraries: React.js, Deepface, Matplotlib, OpenCV, Base64, MongoDB, PostgreSQL

Cloud/DevOps:AWS Certified Cloud Practitioner, Git, Docker, Agile/Scrum

AI Tools:Cursor, Claude, Gemini, Windsurf, N8N, Lovable.dev, Codex, RAG
